# Harsh environments require even harsher tests.

## dB Control delivers.

TWT AMPLIFIERS | MICROWAVE POWER MODULES | POWER SUPPLIES

Before any TWT Amplifier (TWTA), microwave power module (MPM) or power supply ships from dB Control, it undergoes extensive environmental testing. Our capabilities include environmental chambers accommodating enclosures from small airborne to large rack-mount assemblies, automated 24-hour ESS test cycling, HALT/HASS, high G-force vibration testing and custom combinations of temperature and altitude testing. If you expect your high-power products to be just as reliable in blistering heat as in bitter cold, contact us today.
